Product description

ACS1 is designed to generate the foam for carrying the rock excavated by the drill bit up to the surface.

The product gives closed and durable foam with excellent emptying properties.

The half life period of the foam is approximately 20 minutes. Foam can be stabilized by adding specially designed polymers.

All ingredients of ACS-1 are readily biodegradable by OECD criteria

Usage

ASC-1 should be applied at a concentration of 0.5-1.5% and in case of soaking of a large amount of groundwater, the concentration should be increased to 3%.

Safety of usage

The product has been classified as irritant to skin and eyes (H315, H319).

WARNING!!! Please read the Material Safety Data Sheet before use.
